Information management technologies and practices currently used to exploit the exponentially growing volumes of data are rapidly becoming inadequate. For instance, a battalion intelligence analyst requires time-critical information spread across 200 different networks in 20 different languages. Upon uncovering a bad lot of batteries, a satellite program manager must survey 15 different contracts as-designed and as-built lists to ensure none of the faulty batteries are used. A deployed commander cannot write his or her subordinates promotion recommendation forms because the local area network does not host the requisite forms viewer software. A Marine platoon commanders intelligence requirements change as he moves from stateside training, to forward base operations, to patrol. These users must access and manipulate unstructured data, obtain and share contextually relevant information, and operate from and across dissimilar IT systems. Effective information management capabilities are a critical requirement, not a luxury. In their testimony to the Senate Committee...
